Company Profile

ISI Home provides full-service-packages for individual real estate projects. The company is focusing on development and construction of investment real estate for private and institutional investors. Housing projects for acquirers planning to fulfill their wish to own their own home are offered as well

ISI HOME was founded in 1996 as a private building administration agency. When the company founder Heiko Schaar was included into a craft construction company, a high affinity for the construction and the repair of existing and refurbishment real estate resulted. The first projects were handled with business partners in 1998 and 1999 at Eisenach and Halle. Extensive analyzes concerning demographics and the neighborhood development help to this day to develop suitable real estate offers.

The number of employees has grown steadily during the last years. In this context the company counts on its own training and further education as well as the development of the employees. Today the ISI HOME Group is focused on the customer benefits of the real estate products. Clear responsibilities ensure optimal service for investors and tenants. The competences are centered in the new ISI HOME corporate group headquarter at Bebra since 2018. Overall, 60 employees work at the locations at Leipzig, Halle, Chemnitz, North and East Hessen.
